# Extended master's programmes 2023-24

Extended master's programmes

London Metropolitan University extended master's programmes are designed to help international students to acquire, develop and demonstrate the skills required to successfully undertake postgraduate study in their chosen field.

Our extended master's programmes begin with a 15-week Pre-master's Programme (PMP) on the main campus of London Metropolitan University followed by a one-year full-time principal master's degree.

Pre-master's Programme (15 weeks long) → Master's degree (one year full-time)

Pre-master's Programme

The Pre-master's Programme has been specifically designed to enhance international students' skills and knowledge of UK higher education in preparation for their chosen field of study at London Metropolitan University. More specifically, the Pre-master's Programme will help you to:

- develop knowledge of your chosen subject area and prepare for postgraduate study in the UK
- identify and develop research skills to support your study at master's level
- improve your self-management and personal awareness qualities needed by independent and reflective learners
- develop the ability to apply critical thinking skills to the understanding of unfamiliar environments

After completing the PMP, international students will join the master's programme in their preferred area of study at London Metropolitan University.

Subject to meeting academic progression requirements for the principal course, students can progress to the below list.

Master of Business Administration Extended Master's MBA
Develop your understanding of business operations and the external factors affecting organisations, as well as how to navigate business decisions in a changing environment.

International Business Management Extended Master's MSc
Gain an in-depth understanding of global business organisations, the environments in which they operate and how they create value sustainably.

International Business Management with Project Management Extended Master's MSc
Develop an in-depth understanding of business organisations, their external environment and how they create value sustainably, with a particular focus on the area of project management.

Data Analytics Extended Master's MSc
Dive into vital subjects including data mining, statistical modelling, business intelligence and data visualisation.

Computer Networking and Cyber Security Extended Master's MSc
Provides knowledge in the very latest security principles, tools and techniques taught by specialist staff in a dedicated IT security laboratory. You'll gain an understanding of the principles underpinning effective approaches to cyber defence in response to a cyber-attack.

Public Health Extended Master's MSc
Learn about the fundamental factors when considering public health, from the viewpoint that public health policy is much wider than healthcare alone.

Education Extended Master's MA
You'll gain the knowledge and confidence to debate different subjects around philosophy, the history of education, curriculum theory, psychology and much more.
